

Equipment  
**Vertical Carousel Systems/Vertical Lifts**

## **AUTOMATED STORAGE & RETRIEVAL**

Vertical Carousels/Lifts save space by making use of your available room height while using a minimal footprint in your facility. The compact design allows 60% or more storage capacity with fewer footprints.

Vertical Carousels and Lifts increase your productivity through automated storage and retrieval processes. These units bring your files or goods to you in seconds saving you the travel time picking or putting away each file or good.

Secure your files or goods through access control so only authorized people access can access what you want them to get. This includes an audit trail to see what people have pulled, put back, and when. Inventory control through software and controllers allows you to min/max your supplies and control your inventory status at all times.

Vertical Carousels and Lifts bring the files or goods to an ergonomically built access opening. This increases the safety of your workers as they are no longer bending for the bottom shelf or climbing ladders.

Each Vertical Carousel and Lift is fully enclosed to keep out dust, light, and secure access. Applications are used to store files, parts, supplies, bulky, and heavy parts. Temperature controlled units are available and seismic zone 4 approved designs.

Vital Valt offers turnkey design, sales and on-site assembly of Secure Storage Systems.
